16 headline months of #6 before and after the nearshore hybrid (page 1 of 2): samples | VIIRS−clipped (the 6 Oct 2026 map) | hybrid mask5

2 in the titles = bloom area >= 10,000 cells/L (+ = added by the hybrid). Orange = cells the hybrid changed. Purple shading in the hull column = the mask5 set (VIIRS no−data mask or within 5 km of the coa
FWC class (viridis, light = background to dark = > 1,000,000 cells/L), border = VIIRS cell that month (red masked, black valid with no detection, blue valid with a detection). Maps: pipeline palette, white below
