Hybrid footprints, 16 headline months of #6 + two low_vs_hull + two control months (page 1 of 2): samples | current | mask | coast2 | coast5 | mask5 | coast10 | hull

km2 in the titles = bloom area >= 10,000 cells/L (+ = added to the current map). Orange = cells where the variant differs from the current map (hybrids: cells the hull adds; hull column: cells where the hull and VIIRS footprints differ).
Samples: fill = FWC class, border = VIIRS cell status (red masked, black valid−0, blue valid+). Map colours as the pipeline PDFs, white below 10,000 cells/L.
