1985 | A FWC counts | B sdmTMB unclipped | C VIIRS clipped | D MODIS clipped | E hulls | F final: the hybrid nearshore map (rule mask5adj)

Red frame: the clip the final map is built on. F carries the outline of the framed panel (grey) and of the nearshore set (black). Land (wheat) is the 1,310 land cells of the 5-arcmin template, as the maps carry them.
Each map panel prints its total exposure (cells/L summed over the water cells), the positive cells and the five FWC classes; panel A counts the samples.

2002 | A FWC counts | B sdmTMB unclipped | C VIIRS clipped | D MODIS clipped | E hulls | F final: the hybrid nearshore map (rule mask5adj)

Red frame: the clip the final map is built on. F carries the outline of the framed panel (grey) and of the nearshore set (black). Land (wheat) is the 1,310 land cells of the 5-arcmin template, as the maps carry them.
Each map panel prints its total exposure (cells/L summed over the water cells), the positive cells and the five FWC classes; panel A counts the samples.

2017 | A FWC counts | B sdmTMB unclipped | C VIIRS clipped | D MODIS clipped | E hulls | F final: the hybrid nearshore map (rule mask5adj)

Red frame: the clip the final map is built on. F carries the outline of the framed panel (grey) and of the nearshore set (black). Land (wheat) is the 1,310 land cells of the 5×arcmin template, as the maps carry them.
Each map panel prints its total exposure (cells/L summed over the water cells), the positive cells and the five FWC classes; panel A counts the samples.
